PAX-TITE
LEATHER PACKINGS

For Hydraulic Pressure, Compressed Air and Other Purposes Where High Quality Packings Are Required

We have been building hydraulic machinery for over 70 years and found early in our experience that a perfect packing could not be bought. We, therefore, experimented with various materials and designs in order to produce a satisfactory packing. These experiments have led to PAX-TITE packings, which we present to the trade with the assurance backed by our long business success that these packings are the best that perfect material plus careful workmanship has yet produced.

Is it not logical that the packings we put in our own machines, upon the performance of which depends our business success, are the best adapted for the purpose?

This should appeal to you strongly. It will mean trouble eliminated, delays avoided and the efficiency of your machines increased.

are built for all classes of service, all capacities, and all heads.. They are built both single-stage and multi-stage and with vertical and horizontal shafts, and are so constructed that all internal parts are accessible for inspection or replacement upon lifting the casing cover, and without disturbing discharge or suction connections. All parts subject to wear are made to limit gages, on an interchangeable basis, and are easily and quickly renewable.

Efficiencies are guaranteed. Pumps for specific conditions are tested before leaving the factory, and when requested purchaser is supplied with copy of test report.

Centrifugal Pumps of every description from a small pump with ¾ in. openings and a capacity of 10 gals. per minute to a 60-in. pump with a capacity of 100,000 gals. per minute, for water works, irrigation, drainage, mine, chemical plants, fire protection, quarry, dredge, hydraulic giant caisson, foundation, sump, trench, bilge, boiler feed, condensing, street flushing and general purpose pumping.

Deep Well Turbine Centrifugal Pumps for pumping wells 12 ins. and larger in diameter and to 250 ft. in depth.

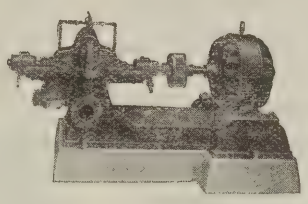
Deep Well Plunger Pumps, Single Acting, Double Acting and 2-stroke.

"AMERICAN" CENTRIFUGAL PUMPS

These pumps are built in a large number of standard types, and in addition special pumps are designed and built to meet particular conditions.

Centrifugal pumps are made with either open type or enclosed type impellers, with or without diffusers and with either suction or double suction in single stage pumps. All double suction pumps and some single suction pumps are made with split casing, so designed that the cap, or cover, of the casing can be removed to expose internal working parts without disturbing pipe connections.

Characteristics — The important features of "American" centrifugals are skilful designing so that they attain high efficiencies with flat efficiency curves, thus being economical in use through a wide range of delivery; use of good material in their construction, careful machining and accurate adjustments.



Bearings are ring oiled from oil reservoirs. Impellers are given both rotative and end thrust balance. In single suction, open impeller type pumps, the sides and edges of impeller and interior of casing are carefully machined and closely adjusted at sides to prevent leakage.

Double suction types are fitted with labyrinth rings around suction openings to reduce leakage to a minimum. Multistage, enclosed impeller types are designed to have fewest points of leakage back to suction openings.

Drive — "American" centrifugal pumps are equipped with plain pulley for belt drive, with grooved sheave for rope drive, steam engine, gasoline engine, electric motor, steam turbine, or with hydraulic turbine.

Pumps are also supplied unmounted with flexible shaft coupling for any power, or mounted on base, but without attached power.

Catalogs—Catalogs describing "American" Pumps will be sent on request. No. 149 describes centrifugals; No. 130A, Deep Well Plunger Pumps.

Rotary Air Compressors

These compressors are for all purposes requiring air pressure—gas and oil furnaces, agitating liquids, atomizing, glass blowing, laundries, liquid air lifting, etc. They give a direct, non-pulsating supply of air without the use of air receivers of any kind.

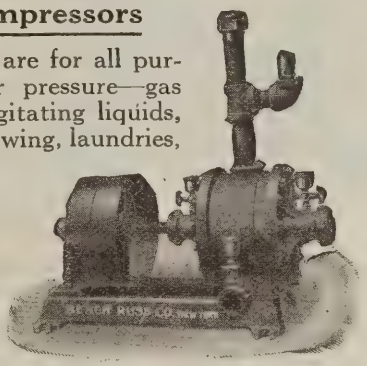

Fig. 1

Single Stage Vacuum Pumps

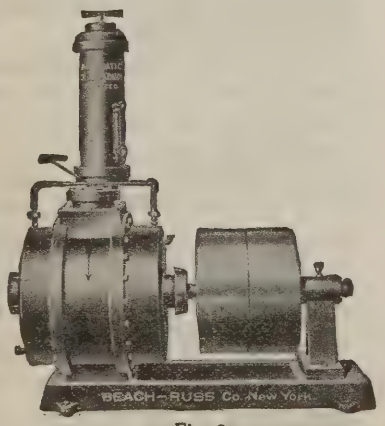

Fig. 2

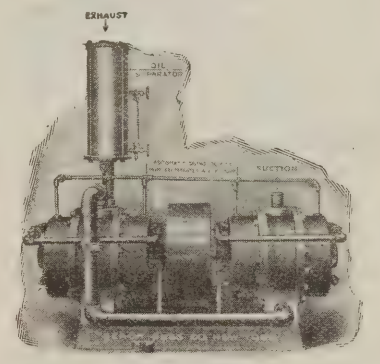
These pumps (Fig. 2) may be used for all purposes where a vacuum up to 28 in. (711 mm.) is required. They are built in the same capacities as the Beach-Russ Rotary Air Compressors.

Compound High Duty Vacuum Pumps

Guaranteed to exhaust to within 1/10″ of the barometer.

These pumps (Fig. 4) were awarded the gold medal at the Panama-Pacific Exposition. They are simple in construction and silent in operation, have no gears or complicated parts, take up little room and have low power consumption per unit volume of air displaced.



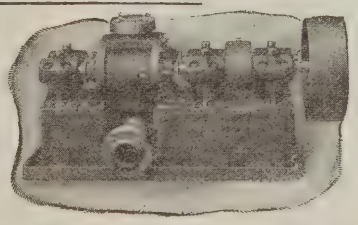


Fig. 4

USES—These pumps can be used to advantage in distilling, incandescent lamp exhausting, preserved food sealing, vacuum bottle manufacturing, vacuum heating, liquid transferring, laboratories and many other operations. Ball bearing construction.

Heavy Liquid Pumps

These pumps (Fig. 5) are designed for pumping coal tar products, oils, greases, paints, varnish and other liquids of high viscosity. Capacities 1 to 500 gallons per minute.

A Flinn & Dreffein Bituminous Producer Gas Cleaning Plant for Delivering a Tar-Free Cold Gas

WASHERS AND SCRUBBERS FOR PRODUCER GAS

We design and build complete plants for removing tar from and washing bituminous producer gas so it may be transmitted cold through standard steel piping, to be used for all kinds of furnace operations the same as natural or city gas and fuel oil.

Clean producer gas finds its field in factories where heating operations are widely scattered and at considerable distances from the gas plant.

Our cleaning equipments are operative in connection with any standard gas producers and may be installed as an accessory to existing plants.

TEMPTATION *to* FALSE *economy*

is strongest when business is poor. Many a man who buys only the best in prosperous times yields to the temptation of "cheap" materials when his order file runs low.

A FEW EXTRA DOLLARS IN FIRST COST

are well spent if they save *many* extra dollars in maintenance and repair expenses. In dull times it is more than ever important to avoid high operating costs.

A COMPARISON COSTS YOU NOTHING

Let us submit an estimate before you place any order for rail—no matter whether you intend to buy relayers or new steel.
